EBAA Eye Bank Accreditation Consulting

Last reviewed October 2026 · https://www.integralhs.com/ebaa-eye-bank-accreditation

What to have ready

This list draws on EBAA's Accreditation Process [https://restoresight.org/members/accreditation/accreditation-process/] page and the Medical Standards [https://restoresight.org/members/publications/medical-standards-procedures-manual/] page (edition not stated on the public page), both opened October 3, 2026.

1. Your current copy of the EBAA Medical Standards and Procedures Manual, and the date of the version your SOPs were written to.
2. A list of the functions you perform, using EBAA's six: recovery, storage, tissue evaluation, donor eligibility determination, processing and final distribution.
3. Staff qualification and training records, one of three areas the pre-inspection questionnaire covers.
4. Your agreements with outside labs and service providers, a second questionnaire area.
5. Testing and maintenance records for your processing and storage equipment, the third questionnaire area.
6. Your policies and procedures, indexed, since the site inspection covers policies and procedures.
7. Donor and tissue records retrievable for the records review.
8. Staff available for technique observation and interviews during the two inspection days.
9. A CAPA process that can answer quickly. EBAA sets a ten-day window after the inspection for CAPA that is still open.
